SUMMARY

Full-stack engineer with 6+ years building health technology, enterprise applications, and AI products. Work across React, TypeScript, Node.js, Python, and PostgreSQL, from reusable interfaces and API integrations to testing and deployment.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript, Next.js, React Native/Expo, Vue, HTML/CSS, accessibility

Backend & Data: Python, FastAPI, Flask, Node.js, Express, PostgreSQL, SQL, REST and GraphQL APIs

Delivery & AI: AWS, Docker, GitHub Actions, Playwright, Vitest, React Testing Library, RAG, Claude Code

EXPERIENCE

Freelance Full-Stack Engineer · Tibeb Labs

Remote | 2025 - Present

- Build web applications and AI features with React, TypeScript, Node.js, and Python, through deployment and maintenance.
- Build and ship independent products including Tibeb Chat, a RAG assistant, and LoopCam, a notarized macOS virtual camera with live/video switching.

Full-Stack Engineer · SMYL Fitness Rx

Remote | Mar 2025 - Jul 2026

- Built React/TypeScript interfaces and Python/FastAPI services for screening, guided exercise, and administrative analytics on a PostgreSQL-backed fall-prevention platform.
- Contributed to a platform now serving 20K users, with approximately 1.5K screened, 750 chair-stand assessments, and 80 intervention participants.
- Built shared components adopted by other engineers; maintained automated tests, Docker builds, and GitHub Actions deployment workflows.
- Helped migrate an intervention service to Clerk authentication, including user lookup, role mapping, and separate handling for API and page requests.

Full-Stack Developer · Client: Kimberly-Clark

Contract | Remote | Nov 2022 - Feb 2025

- Built React and TypeScript applications for 2,000+ users, plus shared components and frontend standards adopted by other teams.
- Cut API response times about 30% by fixing slow queries; improved page loads with code splitting and lazy loading.
- Cut developer onboarding time about 40% by writing setup documentation and practical guides.

Full-Stack Developer · Client: XTIVIA, Inc.

Contract | Remote | Mar 2020 - Oct 2022

- Built React and Vue interfaces with Node.js and Express backends; rebuilt legacy features into reusable, maintainable components.
- Moved services to AWS microservices, cutting hosting costs about 40%.

PROJECTS

SMYL Engage · SMYL Fitness Rx | Senior exercise platform

- Built daily-workout and assessment flows; fixed authentication loading and distinguished zero repetitions from skipped assessments, preserving valid measurements when profiles were incomplete.
- Refined module-day retrieval to verify program membership and load the requested module's ordered exercises instead of searching the full program.

Tibeb Chat · Tibeb Labs | tibebchat.tibebblabs.com

- Built an embeddable TypeScript widget and Python RAG API with source labels, Gemini/Groq generation fallback, and prepared answers for common questions.
- Implemented Markdown ingestion and normalized cosine retrieval over an embedding index; maintained 35 tests, including a regression check for vector normalization.

EDUCATION & CERTIFICATIONS

BSc Degree in Computer Science and Engineering | Adama Science and Technology University | 2021
